

CSE 604: Artificial Intelligence

Project 3

Deadline: 11 August, 2025

Proposal: December 21 July, 2025

Mid-project evaluation: 4 August. 2025

Theme

The theme for the project is “**AI for Bangladesh 2.0**” or **AI4B2** for short. We aim to leverage AI to take the country forward after the July Revolution of 2024.

Project Overview

In this project, you will use your knowledge of Artificial Intelligence (AI) to address a significant challenge faced by the people of Bangladesh to build a modern and discrimination-free Bangladesh 2.0. The goal is to identify a real-world problem, research its causes and impact, and propose an AI-based solution. You will need to justify why AI is an appropriate tool for solving the problem, design a technical solution, and develop a prototype or model.

Project Phases:

1. **Problem Identification and Analysis:** Identify a specific problem whose solution may strengthen Bangladesh 2.0. This problem should have social, economic, or environmental significance. You should understand why the problem is critical and who it affects. It could be general for all citizens, or specific to a particular demographic. You can focus on areas like healthcare, education, agriculture, environment, infrastructure, e-governance, etc. Try to come up with unique problems and innovative solutions.
2. **Proposal:** You will propose your solution which will include:
 - A detailed explanation of the proposed solution.
 - Justification of why AI is suitable (e.g., automation, scalability, pattern recognition, predictive analysis).
 - Explanation of the type of AI method you will use (e.g., machine learning, deep learning, natural language processing).
 - High-level system architecture or workflow diagram.
 - A plan for how data will be collected, processed, and used in your AI model.

3. Development and Implementation:

You will build a prototype or a proof-of-concept model. It can be desktop, mobile, or web-based, depending on whichever is suitable for the problem.

- **Deliverables:**

- A working prototype or simulation that demonstrates the core functionality of your solution (e.g., a machine learning model, a decision-making algorithm, a chatbot).
- Documentation of the implementation process, including code, libraries, and datasets used.
- A demonstration of how your AI model works

4. Final Presentation and Poster

- **Deliverables:**

- An 8–10-minute presentation, including a demo of your solution and an explanation of your approach.
- An academic poster (standard size) outlining your complete project

Grading Criteria

- **Problem Definition and Research (30%):** Clarity in defining the problem, its significance, and why it is appropriate for AI. Creativity and practicality of the AI solution proposed. Clear justification of the AI methods chosen.
- **Technical Implementation (50%):** Quality of the prototype or proof-of-concept model. Functionality, technical rigor, and proper documentation.
- **Presentation and Poster (20%):** Clarity, structure, and professionalism of the final poster and presentation.
