

Testing Coverage Report

A. M Samdani Mozumder

BSSE 1412

Jul 03, 2025

This report presents the test coverage analysis for the implemented Java packages and classes using JUnit for unit testing and JaCoCo (Java Code Coverage) for measuring code coverage. The goal was to ensure that the core logic is well-tested and the code is reliable and maintainable. The analysis includes line, method, branch, and class coverage.

Current scope: all classes

Overall Coverage Summary

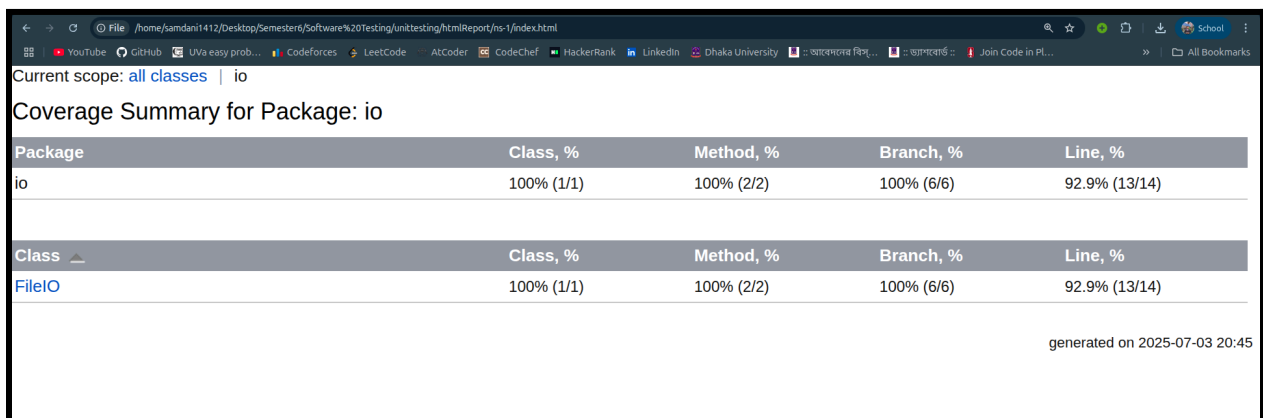

Package	Class, %	Method, %	Branch, %	Line, %
all classes	100% (4/4)	100% (10/10)	100% (32/32)	97.8% (45/46)

Coverage Breakdown

Package	Class, %	Method, %	Branch, %	Line, %
io	100% (1/1)	100% (2/2)	100% (6/6)	92.9% (13/14)
math	100% (3/3)	100% (8/8)	100% (26/26)	100% (32/32)

generated on 2025-07-03 20:45

Fig 1: Overall Coverage Summary

Current scope: all classes | io

Coverage Summary for Package: io

Package	Class, %	Method, %	Branch, %	Line, %
io	100% (1/1)	100% (2/2)	100% (6/6)	92.9% (13/14)

Class	Class, %	Method, %	Branch, %	Line, %
FileIO	100% (1/1)	100% (2/2)	100% (6/6)	92.9% (13/14)

generated on 2025-07-03 20:45

Fig 2: Coverage Summary for package io

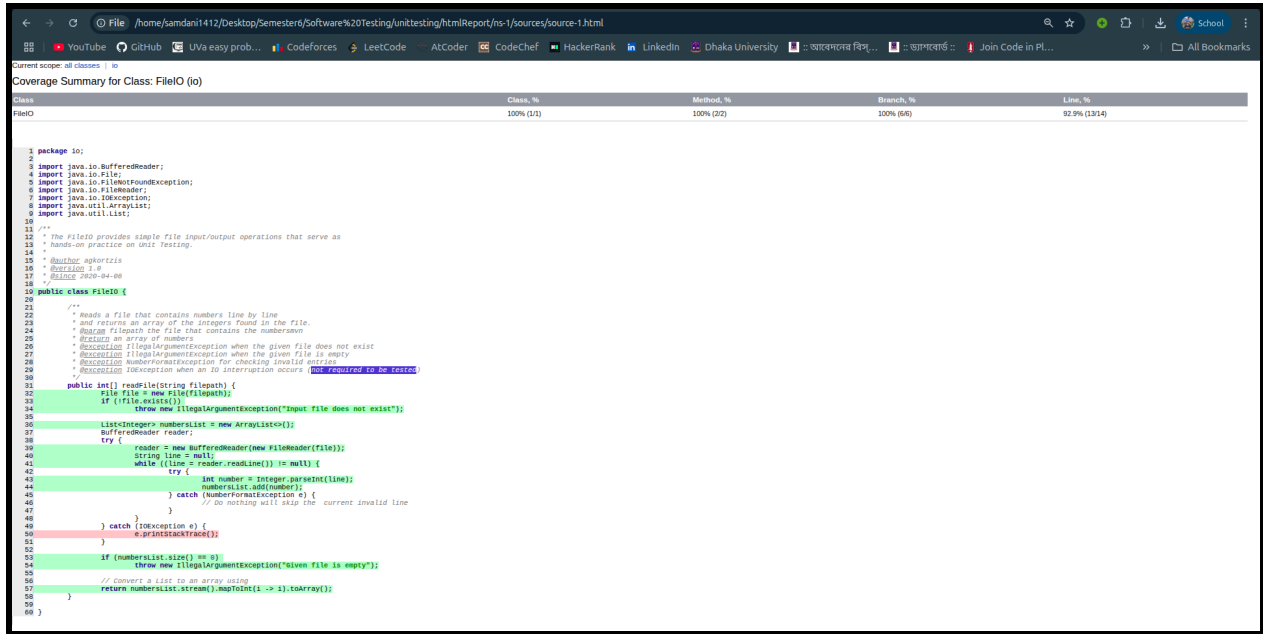

Fig 3: Coverage Summary for class FileIO

Here, line coverage is 13/14 because in the class it was written that IO Exception occurs handling is not required to be tested.
